VARIETY LIST

• PAGE 76

DEAR CUSTOMERS, DEAR PARTNERS,

All of you who have been using Cyclamen Morel genetics for many years, I am very happy and honored to share with you this year, in addition to the many new Cyclamen persicum varieties, the new Morel range of Helleborus and Botanical Cyclamens.

These new species, resulting from the takeover of the Aad KOEN company at the end of 2023, are gradually being integrated into Morel processes to become an integral part of the Morel range.

Many changes have been made over the last 2 years to ensure the continuity of selection and seed production operations for Helleborus and Botanical Cyclamens, and even if the bulk of the improvements and innovations are still to come, the transition is assured.

This event marks the Morel Group's desire to diversify into other horticultural species with very high technical requirements and very high value, and should enable you to support your growth.

This integration has not prevented us from being as innovative as ever in our Persicum F1 range, and I invite you to discover our new series of MACARON® mini cyclamen, with their bright colours and perfect uniformity from late summer onwards, with mixes adapted to North and South. Innovate with INDIKA® red, the first bicolor cyclamen of its kind on the market. Simplify your choices with Metis® North and South mixes, created to suit your climate.

Let's stay united in the face of challenges, and continue together to build a greener, more authentic and sustainable world.

Breeding for a better world.

Éric BEAUDE

The background of the page is a collage of images related to Helleborus. On the left, there is a close-up of a light green leaf with a small hole. On the right, there are two distinct images: the top one shows a white flower petal with prominent dark red or maroon spots, and the bottom one shows a cluster of small, pale yellow, bell-shaped flowers. A solid mustard yellow vertical band runs down the center of the page, serving as a backdrop for the title.
